You don't
want those
otter devices.

Just like an otter's coat, our outdoor AV devices and accessories keep the insides nice and dry.

SpectrAlert® Advance outdoor audible visible notification appliances include weatherproofing features and accessories that keep moisture from rain, snow, or condensation from getting inside the device. This ensures the device will work as needed in an emergency, even in harsh outdoor environments. Get the outdoor AV data sheet to learn more.

Weather is unpredictable, but with our outdoor AV devices and accessories, you can predict stability.

SpectrAlert Advance outdoor AV appliances are an ideal solution for projects that require exterior notification or notification in areas where ambient conditions may exceed the environmental tolerances of typical indoor AV devices. While these outdoor devices are easy to install, several installation procedures and guidelines unique to outdoor models must be followed in order for the devices to perform as intended in outdoor environments...get the Outdoor AV whitepaper to read more.

Leaks
have you
nervous?

Not sure how to weatherproof your outdoor AV Devices? Avoid these mistakes!

Outdoor notification appliances are exposed to harsh environmental conditions, and details like proper sealing can make all the difference in an installation. The examples at the link on the right are from real horn strobe installations gone wrong: do not try any of them at home (or on the job). Can you spot the mistakes from the picture alone?

Caulk this way.

**SPECTRAlert**
A.P.V.A.N.S.E

When installing outdoor AV devices and accessories, learn how and when to unholster the caulk.

When installing outdoor AV products, there are times and places when caulk should be used. For example, the outdoor flush mount products and accessories video on the right highlights the proper application of caulk in a flush mount installation. Remember, more isn't necessarily better, and where you use caulk is often just as important as how.
